

Surgical Dressings - Product Classification List

The following product list identifies the correct HCPCS code to be used for surgical dressings. This list is not all-inclusive. Questions concerning the coding of items not on this list should be directed to the SADMERC. For dressings not on the list, suppliers should use their knowledge of the dressing and information in the medical policy to determine the correct code until a determination is published in a future update or they receive a response from the SADMERC to a coding inquiry.

If a range of codes is listed, it reflects the entire code range for the specified product. The particular product may come in sized or product types that correspond to only some of the codes within the range. Suppliers should use their knowledge of the product to select the appropriate code (s) within the range. For example, a particular product may be listed as a hydrocolloid dressing that could have a code range of A6234 - A6239. If that product is only available as a 4 x 4 dressing without adhesive border, only code A6234 would be appropriate. See the Coding Guidelines section of the policy for important coding information, especially directions for coding the size of wound covers.

The codes in the table below are valid for dates of service (DOS) on or after January 1, 1997.

The appearance of a product on this list does not guarantee coverage. This list is not a formal part of the medical policy.

<u>Manufacturer:</u>	<u>Product Name:</u>	<u>HCPCS Code:</u>
3M	A & D Emollient Cream	A6250
3M	A & D Barrier Ointment	A6250
